The Amazing Rapid Compost Tumbler®

- ▶ It's Fast
- ▶ It's Easy
- ▶ It's Clean
- ▶ It's Environmentally Smart

If you're proud of your yard and garden...if you delight in growing beautiful flowers and shrubs, and raising bountiful garden crops ...if you're looking for a way to dispose of yard and garden wastes without sending them to the landfill...then you'll welcome the way our Rapid Compost Tumbler works for you!

Here's the easy, time-saving way to turn your grass clippings, leaves, kitchen scraps, old garden plants, and bloomed-out flowers - virtually any organic waste you have - into a rich natural compost.

And you can do it in your own yard without the smells, unsightly appearance, and backbreaking effort of composting in open heaps or bins. Just give the handle a few easy turns each day and in 14 days enjoy your compost!

Back Yard Composting

Turn your organic waste into nutrient rich compost in 14 days with Australia's largest range of composters

The Benefits of Using the Rapid Compost Tumbler

The Benefits of Using Compost

Your unlimited supply of FREE natural compost will give you fabulous results.

- **Better Soil.** Homemade compost adds rich nutrients and organic matter back into your soil, creating healthy loam for better drainage.
- **A More Productive Garden.** By tilling 5cm to 10cm of homemade compost into your garden soil, you'll add nature's nutrients... to produce healthier, more productive plants.
- **Healthier Flowers.** Using compost helps your flowers develop stronger root systems for healthier growth and disease resistance.
- **An End to Weeds.** By spreading about 5cm of compost around your growing plants, you'll virtually smother weeds. Plus you'll retain valuable moisture in your soil and stabilise the soil temperature.

What to Compost

Here are just some of the compost materials you can use:

- **Grass Clippings.** Good source of nitrogen, mulch and humus matter
- **Kitchen Refuse.** Adds moisture and balance
- **Garden and Yard Waste.** Good mulching material, excellent source of nitrogen
- **Leaves.** Excellent humus-builders, as well as being rich in carbon, phosphorous, potash, calcium and magnesium
- **Sawdust.** Good mulch and compost material
- **Wood Ashes** Contain phosphorous and potash
- **Newspaper.** If shredded first, makes a good "Blotter," especially if other material is moist
- **Manure** Manure from horses, cows, chickens, pigs and sheep

It's Quick - making nature's best fertiliser fast!

The design of the Rapid Compost Tumbler ensures that internal temperatures rise quickly. Temperatures get up to 70°C - hot enough to kill weed seeds! Daily tumbling turns the mixture, evenly distributing the moisture, exposing

the complete mix to essential oxygen, and building up a new heat core- the essential environment for necessary microorganisms.

Best of all, the durable drum of the Rapid Compost Tumbler keeps your mix off the ground so that all your nutrients will remain in your compost - where you want them - instead of leaching into the ground the way they do in compost heaps and bins.

With these outstanding features, the Rapid Compost Tumbler can give you a fresh batch of rich, compost in just 14 days!

It's Clean and Neat - no messy heaps, smells, or flies!

Here's another reason why thousands of gardeners love the Rapid Compost Tumbler! The enclosed drum means there are no open messes to attract flies, bees, insects, pests and rodents.

Furthermore, your speedy, contained composting is done with no unpleasant odours. Your neighbours won't even know you're composting (until they see the fabulous results!)

Plus, the attractive design blends into the background of grass, trees, and shrubs. What a pleasant change from the unsightly eyesore of an open compost heap that can detract from the appearance of your property.

It's Easy to Use - no bending!

With a Rapid Compost Tumbler, composting has never been easier!

Each model has been ergonomically designed for effortless turning and is elevated for wheel barrow access.

You won't need a pitchfork. You won't need a special tool. You don't open any doors or risk spilling your mixture when turning it. You won't need to get on your knees to dig the finished compost out. You'll save a lot of work and a lot of time.

It's a Recycling Solution - reduces landfill and saves water!

Grass clippings, kitchen refuse, yard and garden waste, leaves, sawdust, fireplace ash, newspaper... up to 50% of household waste can be composted.

Sending this waste to landfill involves anaerobic decomposition which releases

harmful greenhouse gases into the environment.

The Rapid Compost Tumbler can turn all your organic waste into rich fertiliser that will replenish the nutrients in your soil. Why pay for store bought products or a greenwaste bin?

Spreading compost around your gardens also significantly reduces water usage by reducing evaporation and increasing moisture retention.

Your impact on global warming and water shortages can be significantly reduced through the responsible action of composting your organic waste.

14-Day Compost is as easy as 1, 2, 3

1. Easy to Fill

Gather your mix of organic left-overs and refuse and put it in the drum. Close the door and you're ready to go!

2. Easy to Turn

Give the handle a few easy turns each day. This will mix and aerate your material to build up a heat core for fast decomposition.

3. Easy to Empty

After 14 days open the door and empty your finished, sweet-smelling compost. It's ready to use, and you had no mess and no back-breaking effort.
